

ITAC Program Summary

Digitally aware, connected and smarter in transforming Aged Care

Steve DeLaurier, National director Health & Life Sciences

Global Business Services

IBM Healthcare Solution

The global economic and demographic trends continue to strain our health systems and economies. Although these trends create additional pressures, they also provide a number of opportunities to transform and improve the way care service is provided in the aged care setting. The needs of the aging are primarily chronic requiring new models for care, collaboration, and channels for access to appropriate care.

Through the application of 'open standards' aged care providers can offer better quality care through personalized solutions assembled from a rich marketplace of interoperable health care devices and services. Medical device manufacturers can rapidly develop interoperable devices and services using industry developed connectivity standards. Individuals can better manage their health through personal medical devices and services.
